How to read this

Each row is a card. 'Picked' runs took the card when it was offered; 'skipped' runs saw it and passed. Both groups reached the offer, so the comparison avoids the survivorship bias of comparing against the overall win rate.

Pick Win Delta = win rate picked - win rate skipped. Green means runs did better when you took it; red means worse.

Rows are tinted by the card's character (Ironclad red, Silent green, Defect blue, Necrobinder purple, Regent gold, colorless grey).

Only cards picked AND skipped in at least 15 runs are shown. Correlation, not causation: you pick cards when your deck already suits them.
